

Pasindu Dulanjaya Panditharathna

Software Engineer

Self-motivated and hardworking with an optimistic character, I thrive in challenging environments and consistently achieve goals through a combination of past experiences and continuous self-study. I am adaptable to any work environment and maintain unwavering dedication to completing tasks through to the end. As a Software Engineer, I am eager to leverage my extensive software engineering skills and knowledge gained through relevant education and projects to contribute to the ongoing success and growth of your esteemed company.

WORK EXPERIENCE

Software Engineer

September 2019 - Present

General Sir John Kotelawala Defence University

- Optimized software for improved speed and efficiency, employing advanced programming techniques and thorough performance analysis. Implemented strategic optimizations at both the code and system architecture levels, significantly enhancing system responsiveness and operational throughput. This focus on efficiency directly contributed to an improved user experience and increased system reliability.
- Collaborated with cross-functional teams to deliver bug-free solutions. Fostered a strong team dynamic and efficient communication channels to ensure seamless integration of diverse expertise. My role in rigorous testing and quality assurance processes was pivotal in maintaining high standards of software integrity and functionality.
- Contributed to process and workflow improvements, streamlining development practices and enhancing team productivity. Implemented Agile methodologies and continuous integration/continuous deployment (CI/CD) practices to optimize the software development lifecycle. These improvements resulted in faster delivery times, reduced errors, and a more adaptive development process.
- Developed an innovative Transcript Generation System aimed at revolutionizing the creation and distribution of academic transcripts in educational institutions. This system was meticulously designed to automate the entire transcript process, from data collection and processing to the final generation and distribution of transcripts. By integrating with existing student databases and academic record systems, it ensured accurate and up-to-date information was reflected in each transcript.
- Developed an advanced Exam Results Management System, revolutionizing the way educational institutions manage and disseminate exam evaluations and results. This comprehensive system streamlined the entire process by automating result calculations, ensuring data security with advanced encryption and access controls, and providing a user-friendly interface for both faculty and students. The centralized database reduced administrative burden and human error, while offering customizable result formats and detailed analytics for performance assessment. The system significantly improved operational efficiency, transparency, and satisfaction levels among users, thereby transforming the educational assessment landscape.
- Developed a Venue Management System, intricately designed to streamline the allocation and scheduling of event spaces. Its primary functionality lies in its ability to display available venues in real-time as users input their bookings. This feature not only enhances the user experience by simplifying the booking process but also ensures optimal utilization of event spaces. The system dynamically updates availability, providing instant visibility into vacant venues based on the current bookings. This real-time update capability significantly improves operational efficiency, allowing both staff and clients to make informed decisions quickly.
- Developed an efficient Online Transcript Requesting System designed to automate and simplify the process of academic transcript requests. It allows students and alumni to easily submit requests for their transcripts online, removing the need for physical paperwork. Users can detail their needs, such as transcript type and quantity, through a straightforward interface. A key feature is the system's real-time status tracking, which lets users monitor their request's progress from submission to dispatch. This automation not only speeds up the request process but also significantly reduces the administrative load, streamlining operations and improving user satisfaction by offering a transparent and quick service.

Software Engineer Elements (PVT) Ltd

August 2017 - August 2019

- Crafted clean, maintainable code employing advanced object-oriented programming principles, demonstrating deep expertise in C#, .NET Core, Flutter, ReactJS, and JavaScript. My approach combined best practices in software design with a strong command of these technologies, leading to the creation of a robust, scalable, and efficient system architecture.
- Engaged in insightful client discussions to refine project requirements, ensuring a deep understanding of their needs. This client-centric approach enabled the delivery of tailored software solutions that not only met but often exceeded client expectations. My active participation in these discussions was instrumental in bridging the gap between technical possibilities and practical requirements.
- Focused on enhancing software optimization to boost speed and operational efficiency. Implemented a range of optimization strategies, from code refactoring to algorithm improvement, significantly improving the performance and responsiveness of the software. This resulted in a user experience that was both smooth and reliable, even under high-load conditions.
- Leveraged cutting-edge development tools and technologies to drive innovation and maintain a competitive edge in software deliverables. Continuously updated my technical knowledge and skills, ensuring the use of the latest and most efficient methodologies. This commitment to innovation and quality was a driving factor in delivering state-of-the-art software solutions that consistently met the evolving needs of the industry.

Associate Software Engineer Eutech Cybernetics

January 2017 - July 2017

- Developed clean and maintainable code for an Integrated Building Management System (IBMS) project. Focused on creating a system that is both user-friendly and efficient, my role was integral in ensuring the platform was robust and streamlined for effective building management. Emphasized modular design for ease of future enhancements and maintenance.
- Applied advanced object-oriented programming concepts to significantly enhance the software architecture. This approach, focusing on encapsulation, inheritance, and polymorphism, resulted in a scalable and flexible system design. The strategic application of these principles improved system functionality and adaptability to evolving requirements.
- Optimized the code base for maximum speed and efficiency, crucial for the system's real-time responsiveness. Employed various techniques to improve algorithm efficiency, effective memory management, and reduced computational complexity. This focus ensured the system's capability to handle high-load scenarios smoothly.
- Collaborated effectively with the development team to ensure efficient processes and the delivery of bug-free solutions. Leveraged Agile methodologies to enhance team coordination and productivity. Contributed significantly in code reviews and pair programming, maintaining high coding standards and fostering a culture of continuous learning and improvement.

PERSONAL PROJECTS

ERP System

- The ERP system I architected offers a suite of powerful tools designed to streamline an array of business processes. It includes modules for managing core business elements like Fabric Tracking, Finished Goods Receiving, Packing, Invoicing, and Fast-Moving Consumer Goods. Additional functionalities, such as Stock Adjustment and Balance Reports, allow for meticulous control over inventory and detailed financial oversight.
- The system also incorporates a Quotation module, simplifying the generation and tracking of sales quotes, enhancing the sales process's efficiency. An integral feature is the user management system, which provides control over access permissions and enhances system security. Each module is developed with a keen focus on user experience, ensuring that the interface is intuitive and that data retrieval is both rapid and reliable.
- The dashboard provides at-a-glance insights into critical performance metrics, such as daily sales and fabric profit, alongside comprehensive views of finished goods totals and monthly sales and profit trends. This centralized dashboard empowers decision-makers with real-time data to inform strategic business decisions, drive growth, and improve profitability.

Concentration Gym (Web)

- The website is meticulously designed as a cognitive sharpening platform, centered around games that are specifically engineered to challenge and potentially enhance concentration abilities. It boasts a virtual 'gameroom' where users can immerse themselves in a variety of puzzles and activities presented on a digital gameboard. Each game is intricately crafted with multiple levels of difficulty, catering to a wide range of users from beginners to those seeking an intense focus challenge. To foster a competitive spirit and encourage self-improvement, the site features leaderboards that display top scores and track performance over time. These leaderboards not only recognize individual achievements but also motivate users to surpass their previous scores, thus promoting a continuous pursuit of cognitive enhancement through engaging and interactive gameplay.

Visualization App (Mobile App)

- This Flutter application serves as a unique motivational tool, ingeniously designed to capture and store users' voice recordings of their future aspirations. It acts as a personal cheerleader, with a feature that plays back these recorded affirmations as alarm notifications. This innovative approach transforms routine alerts into powerful moments of inspiration, effectively reminding users of their long-term goals and desired achievements at the start of each day or at scheduled intervals. The application provides an intimate and personalized experience, encouraging users to vocalize and reaffirm their commitments to their objectives, thus fostering a positive mindset and a focused resolve to take the actions necessary to realize their dreams.

Other - Social Media Wesbite (NextJS) , Student Portal (NextJS) , Battery App (Flutter) , VSCode Extensions, Web Scraper, Outlook Extention and etc.

EDUCATION

MSc in IT

University Of Moratuwa - Reading

BSc In IT Specialized in (IT)

SLIIT

Best Overall Performance award 2017 (Epic Excellence Award (Epic Technology Group))

ACHIEVEMENTS

- Captain – Men's Badminton Team (2016)
- SLIIT- Colors Badminton (2015)
- School Badminton Captain (2008)
- All Island School Badminton Colors (2008 - 2012)
- Kalutara District Badminton Champion under 19 (2009 , 2010)
- SSC Open Badminton Championship 2010 Under 19 Runners-up (2010)
- Ministry Of Sports XL National Sports Festival District Champion (2014)
